
COMMERCIAL PROPOSAL & STATEMENT OF WORK

Confidential — Prepared for the Client

Enterprise Food Delivery & Operations Platform

A single web platform for ordering, in-house delivery,
inventory, payments and business intelligence.

London, United Kingdom • 45-Day Delivery • 60 Days Support

Document Control

Document title	Enterprise Food Delivery & Operations Platform — Commercial Proposal and Statement of Work
Reference	PROP/FD/2026/001
Version	1.0 (Issued for client review)
Date of issue	September 2, 2026
Prepared by	Mohammed Hyder Ali · Om Verma
Prepared for	The Client — London, United Kingdom
Commercial validity	30 calendar days from date of issue
Classification	Confidential — for the named recipient only
Status	Awaiting client confirmation and sign-off

How to read this document. Sections 1 to 8 are written in plain business language and require no technical background — they describe *what the platform does* and *what it is worth*. Sections 9 to 15 cover delivery, commercials and terms. Section 13 (**Out of Scope**) is as important as the feature list: it defines the exact boundary of the fixed price, and anything outside it is chargeable once development has started.

Confidentiality. This document and its contents are confidential and are supplied solely for the purpose of evaluating the proposed engagement. It may not be reproduced or disclosed to any third party without prior written consent.

1 Executive Summary

You are commissioning a single, web-based platform that runs the entire commercial operation of your food business — from the moment a customer in London opens your website, through kitchen preparation, in-house delivery inside your seven-mile service area, payment settlement via Stripe, and finally into the stock, sales and profitability reports you use to run the business.

Today, most independent food businesses in London reach their customers through third-party marketplaces. Those marketplaces are effective at discovery, but they are expensive at scale and, critically, they own the customer relationship. Published 2026 UK figures place aggregator commission at roughly **14–16%** where the restaurant delivers its own orders, and **25–30%** where the platform's couriers deliver. Every repeat order from a customer you have already served and already satisfied is charged again at that rate.

This platform is the direct alternative. It does not replace marketplaces — it gives you a channel you own, where the cost of taking an order falls to the card processing fee alone (Stripe, **1.5% + £0.20** on UK cards), and where the customer, their order history and their contact permission belong to you.

The commercial headline. On a conservative model — a business taking 250 orders a week at a £22 average order value, moving just **40%** of that volume to its own platform — the annual saving against a **14%** self-delivery marketplace rate is approximately **£13,260**. Against a **30%** platform-delivery rate it is approximately **£31,560**. Against a one-time investment of INR 94,999, the payback period is measured in **weeks, not years**. Full workings, assumptions and the honest limitations of this model are set out in Section 4.

1.1 What is being delivered

Item	Summary
The product	A responsive, enterprise-grade web application covering customer ordering, live delivery tracking, kitchen operations, inventory and stock control, menu and pricing management, Stripe payments, email notifications, role-based administration and full business analytics. Everything runs in the browser — no app store, no downloads.
Service area	Automated delivery-zone enforcement with a configurable radius, set to 7 miles from the store, validated by Google Maps geocoding at the point of checkout.
Access control	Thirteen distinct operational roles with granular permissions, under a Super Admin who holds end-to-end control of the entire system.
Payments	Stripe, configured for the UK market in GBP, with card payments, secure customer authentication, refunds, and automated reconciliation against orders.
Delivery timeline	45 calendar days from written confirmation and receipt of the initial payment.
Commercial	INR 94,999 fixed price, inclusive of design, development, testing, deployment, training and 60 days of pre- and post-launch support.
Cloud costs	All cloud and infrastructure charges incurred <i>during development</i> are borne by us. One month of post-launch cloud hosting is provided complimentary .

1.2 Why this team

Both engineers on this project work daily in the exact technology set this platform requires — Next.js and React on the front end, Django and PostgreSQL on the back end, Stripe for payments and Google Maps for location intelligence. This is not a stack being learned on your budget; it is the stack we have shipped repeatedly. That is the single biggest reason a 45-day delivery window is credible rather than optimistic.

A note on honesty. This proposal deliberately includes an explicit out-of-scope list (Section 13), a risk register (Section 14), a statement of what we need from you (Section 11), and a set of ongoing costs you will carry after launch (Section 4.6). A proposal that only lists benefits is a proposal that has not been thought through. We would rather agree the boundary now than discover it in week six.

2 Project Confirmation — Our Understanding of Your Requirement

This section restates your requirement in our own words. **Please read it carefully.** If any statement here is wrong or incomplete, it must be corrected before sign-off, because the fixed price and the 45-day timeline are both derived from it.

2.1 The business you are building

You operate a food business serving the London market with your **own delivery team** — not outsourced couriers. You want to stop being dependent on third-party marketplaces for the orders you could take directly, and you want the operational software that a serious multi-site food business needs: real stock control, real costing, real reporting, and real control over who in your organisation can do what.

2.2 Confirmed requirements

#	Requirement as we understand it
1	A web-only solution. Everything — customer ordering, staff operations, delivery rider workflow, and administration — runs in a web browser on desktop, tablet and mobile. No native mobile applications are in scope.
2	Multi-role, enterprise-grade access control , with a Super Admin who has complete end-to-end authority over the software, its configuration, its users and its data.
3	In-house delivery with complete, live tracking — the customer, the store and the administrator all see the same real-time order and delivery status.
4	A 7-mile delivery radius from the store, enforced automatically at checkout. Addresses outside the radius cannot place a delivery order.
5	Inventory and stock management , linked to the menu, so that stock consumption, low-stock alerts and automatic item availability are driven by real orders.
6	Menu, catalogue and price management , including modifiers, options, variants and per-item availability, controlled by authorised roles only.
7	Payments via Stripe in GBP, appropriate to a UK-based business, including refunds and reconciliation.
8	Sales, analytics and business intelligence — revenue, order, product, delivery and stock reporting for management decision-making.
9	Order status and real-time updates throughout the entire order lifecycle, visible to every party that needs it.
10	Email notifications at every significant order and account event.
11	Customer account creation and self-service — order history, saved addresses, saved payment methods and reordering.
12	An end-to-end solution — design, build, test, deploy, train and support — delivered as one accountable engagement.

Scope boundary. The feature list in Section 6 and the exclusions in Section 13 together define the fixed price. **Any feature, integration, screen or behaviour not described in this document will be**

treated as a change request and quoted separately once development has started. This is not a commercial tactic — it is the mechanism that protects your delivery date.

3 The Commercial Case — Why Own the Channel

3.1 What marketplaces actually cost a London food business

Third-party marketplaces are a customer-acquisition service, and they are priced like one. The table below sets out typical published UK rates for 2026. Rates are negotiated per restaurant and your own agreements will govern; these are the market ranges.

Channel	Platform delivers	You deliver	Who owns the customer
Uber Eats	~30%	~14–16%	The platform
Deliveroo	~25–30%	~15%+	The platform
Just Eat	~14–30%	~14–17%	The platform
Your own platform	1.5% + £0.20 (Stripe only)		You

Commission is quoted excluding VAT. VAT charged on marketplace commission is generally reclaimable by a VAT-registered business, so it is excluded from all calculations in this document to keep the comparison conservative. Marketplaces may additionally levy per-order admin fees and optional paid promotion.

3.2 The economics of a single £22 order

Route to the customer	Rate	Cost of the order	You keep
Marketplace, platform delivers	30%	£6.60	£15.40
Marketplace, you deliver	14%	£3.08	£18.92
Your own platform	Stripe only	£0.53	£21.47

Every £22 order moved from a self-delivery marketplace listing to your own platform returns **£2.55** to the business. Moved from a platform-delivery listing, it returns **£6.07**. On a food business's margins, that is not a rounding difference — for many independents it is the difference between a delivery order being profitable and being marginal.

3.3 The three things a marketplace will not give you

1. **The customer list.** You cannot email, re-target or reward a customer you are not permitted to contact. Your own platform builds a permission-based customer database from order one.
2. **Basket control.** You set the menu, the pricing, the upsells and the promotions — not an algorithm optimising for the platform's revenue. Published UK data indicates consumers spend materially more per order when ordering direct.
3. **Operational data.** Stock movement, prep times, delivery times, product profitability and rider performance are your data, in one place, rather than fragmented across portals you do not control.

4 Return on Investment

This section shows the financial case in full, including the assumptions behind it and the conditions under which it does *not* hold. Please read Section 4.5 as carefully as you read the savings tables.

4.1 Model assumptions

Assumption	Value used
Average order value (AOV)	£22
Marketplace rate — conservative baseline	14% (self-delivery tier, which matches your in-house delivery model)
Marketplace rate — upside baseline	30% (platform-delivery tier)
Cost of taking a direct order	Stripe at 1.5% + £0.20 = £0.53 on a £22 order
Share of existing volume migrated to direct in year one	40%
Indicative conversion rate used for the investment	INR 94,999 $\approx$ £888 at INR 107 = £1
Working month	4.33 weeks

The 40% migration assumption is deliberately conservative. Businesses that actively promote their direct channel — QR codes on packaging, receipt inserts, a Google Business Profile order link, email and SMS follow-up — commonly exceed it. Businesses that build a platform and do not promote it will fall short of it.

4.2 Scenario analysis — annual saving

Baseline A: measured against a 14% self-delivery marketplace rate (the conservative case, and the one we recommend you plan against).

Scenario	Orders /week	Direct GMV /month	Commission avoided	Stripe cost	Net saving /year
Conservative	120	£4,576	£641	£110	£6,365
Base case	250	£9,533	£1,335	£230	£13,260
Growth	450	£17,160	£2,402	£413	£23,868

Baseline B: measured against a 30% platform-delivery marketplace rate (applies to whatever share of your volume currently sits on the full-service tier).

Scenario	Orders /week	Direct GMV /month	Commission avoided	Stripe cost	Net saving /year
Conservative	120	£4,576	£1,373	£110	£15,151
Base case	250	£9,533	£2,860	£230	£31,564
Growth	450	£17,160	£5,148	£413	£56,815

4.3 Payback and year-one return

Calculated against **Baseline A (14%)** — the conservative case.

Scenario	Investment	Payback period	Year-one net benefit	Year-one ROI
Conservative	£888	~7.3 weeks	£5,477	~617%
Base case	£888	~3.5 weeks	£12,372	~1,393%
Growth	£888	~1.9 weeks	£22,980	~2,588%

Base case, stated plainly. A one-time investment of INR 94,999 (≈£888) is recovered in under a month of trading, and returns approximately **£13,260 in year one** on the conservative marketplace baseline. Even in the lowest-volume scenario modelled, the platform pays for itself within two months.

4.4 Additional value not counted in the tables above

The savings above are deliberately limited to commission avoidance, because that is the one benefit that is arithmetically certain once volume migrates. The following are real, well-evidenced, and **deliberately excluded from the headline numbers** because their size depends on execution rather than on the software alone.

Value driver	Basis and indicative scale
Higher average order value	Published UK data indicates consumers spend around 35% more per order when ordering directly from a restaurant rather than through a marketplace, because the venue controls merchandising and upsell. On base-case direct volume, even a 10% uplift would add roughly £11,440 of additional annual revenue.
Reduced food waste	WRAP data indicates UK hospitality wastes around 18% of the food it purchases , at roughly £10,000 per outlet per year , of which about 21% arises from spoilage. Live stock tracking, low-stock alerts and consumption reporting address the spoilage component: capturing 20–35% of it is worth an indicative £420–£735 per outlet per year .
Recovered staff hours	Manual stock counts, phone-order taking, WhatsApp dispatch coordination and end-of-day cash-ups are replaced by system workflow. Two recovered hours per day at UK operational wage rates is a five-figure annual figure for most sites.

Value driver	Basis and indicative scale
Owned customer database	A permission-based customer list is a compounding asset. Its value is not modelled here because it depends entirely on how you use it — but it is the single asset a marketplace will never sell you.
Margin visibility	Product-level profitability reporting lets you remove or re-price loss-making menu items. On a typical menu this is frequently the largest single margin lever available, and it is invisible without the data.

4.5 Where this model breaks — read this

The software does not generate the saving. Migrating customers generates the saving. If your customers continue ordering through marketplaces out of habit and you do not actively drive them to your own site, the commission avoidance in Section 4.2 will not materialise, regardless of how good the platform is. Specifically:

- ▶ **Marketplaces provide discovery; your platform does not.** New customers who have never heard of you will still find you on Deliveroo or Uber Eats. The correct strategy is almost never "leave the marketplaces" — it is "acquire on the marketplace, retain on your own platform."
- ▶ **Migration requires deliberate effort from you:** QR codes on packaging, inserts in every marketplace delivery bag, a direct-order link on your Google Business Profile, first-order incentives, and email follow-up. Budget for it.
- ▶ **If you are currently on a 14% self-delivery tier, your saving is the 14% case, not the 30% case.** We have modelled the 14% case as the primary scenario for exactly this reason. Treat any vendor quoting you a flat "save 30%" without asking which tier you are on with appropriate scepticism.
- ▶ **Delivery cost does not disappear.** You already run in-house delivery, so this platform does not add rider cost — but nor does it remove it. Rider wages, vehicles, insurance and fuel remain your cost in every scenario modelled.

4.6 Ongoing costs you will carry after launch

Presented so that your year-one figures are complete rather than flattering.

Ongoing cost	Indicative monthly	Notes
Cloud hosting & database	£30–£80	First month complimentary (paid by us)
Google Maps API usage	£15–£50	Scales with order volume
Stripe processing	Variable	1.5% + £0.20 per UK card transaction
Transactional email service	£0–£20	Free tier sufficient at launch volumes
Domain & SSL	<£2	Approx. £15–£20 per year
Indicative total (excl. Stripe)	£50–£150	≈£600–£1,800 per year

Netting the mid-point of these running costs (£1,200 per year) against the conservative Baseline A saving still leaves a year-one net benefit of approximately **£12,060** in the base-case scenario.

Sources. Marketplace commission ranges, direct-ordering AOV differential and UK hospitality food-waste figures are drawn from published 2026 UK market commentary and WRAP sector data. Stripe pricing is the published UK standard rate for domestic cards. All figures are indicative, are presented for illustration, and do not constitute financial advice; your own trading data and platform agreements should be used for any final investment decision. Currency conversion is indicative only and subject to exchange-rate movement.

5 How the Platform Works — A Plain-English Walkthrough

Before the feature list, here is the platform described the way you would describe it to a member of staff on their first day. No technical vocabulary is used.

5.1 The customer journey

1. **Arrival.** A customer opens your website on a phone or laptop. The site loads quickly, looks and feels like a premium brand, and works equally well on any screen size.
2. **Address check.** Before they browse, they enter their postcode or address. The system checks it against your **7-mile service area**. If they are inside it, they see delivery options; if they are outside it, they are told immediately and offered collection instead — rather than discovering the problem after they have built a basket.
3. **Browsing.** They see your menu, organised into categories, with images, descriptions, prices, dietary and allergen information. Items you have run out of are visibly and automatically marked unavailable — because the system knows your stock.
4. **Building the order.** They choose sizes, options, extras and add-ons. Prices update live. The basket persists if they leave and return.
5. **Account.** They create an account — or check out as a guest and be offered an account afterwards. Registered customers get saved addresses, saved cards, order history and one-tap reordering.
6. **Checkout.** They select a delivery slot or ASAP, apply a promotion code if they have one, and see a fully itemised total including delivery fee, any minimum-order top-up, and VAT treatment.
7. **Payment.** They pay by card through **Stripe**. Card details never touch your systems — Stripe handles them entirely. Strong Customer Authentication (the bank verification step UK customers expect) is handled automatically.
8. **Confirmation.** The order is confirmed on screen and by **email** within seconds, with an itemised receipt and a live tracking link.
9. **Live tracking.** The customer watches the order move through *Confirmed* → *Accepted* → *Preparing* → *Ready* → *Out for delivery* → *Delivered*, on a live map, without refreshing the page. They receive an email at each significant milestone.
10. **After delivery.** They are invited to rate the order, and their history is saved for one-tap reordering next time.

5.2 What happens inside your business at the same time

1. **The kitchen** sees the order appear instantly on a live kitchen screen, with a countdown timer, item-by-item detail, allergen flags and special instructions. Staff mark items as they are prepared.
2. **Stock is deducted automatically** as the order is accepted. If a component drops below its threshold, the responsible manager is alerted — and if it hits zero, affected menu items are taken off sale automatically so you never sell what you cannot make.
3. **Dispatch** sees every ready order and every available rider on one screen, and assigns deliveries — manually, or with a suggested assignment based on proximity and current load.
4. **The rider** opens the platform on their phone, sees their assigned run, gets turn-by-turn navigation, and confirms pickup and delivery. Their location feeds the customer's live tracking map.
5. **Finance** sees each payment reconciled against its order automatically, processes refunds directly from the order screen, and exports settlement reports.
6. **Management** sees revenue, order counts, average order value, best and worst performing products, delivery times, rider performance and stock value — live, on one dashboard, with the ability to drill into any figure.
7. **The Super Admin** sits above all of it, with authority over every setting, every user, every permission and every record in the system.

One system, one truth. The reason this is a single platform rather than a website plus a few spreadsheets is that every one of the steps above reads and writes the same data. The stock number the kitchen sees, the availability the customer sees, and the value on the management report are the same number — not three numbers that need reconciling at the end of the week.

6 Roles and Access Control

You asked for enterprise-grade, multi-role management. The platform ships with the following thirteen roles. Each role sees only the screens and data it needs, and every sensitive action is permission-controlled and recorded in an audit log.

6.1 The role matrix

#	Role	What this role can do
1	Super Admin	Complete end-to-end control of the software. Creates and removes every other user, defines what each role may do, configures the delivery radius, tax rules, payment settings and system-wide parameters, views every record and every report, and can access the full audit trail. Nothing in the system is hidden from this role.
2	Business Owner	Full commercial oversight: all revenue, cost, margin and performance reporting across the business, plus the ability to approve pricing and promotional changes. Cannot alter system-level configuration or security settings.
3	Store / Branch Manager	Day-to-day running of a store: opening hours, accepting and rejecting orders, order overrides, staff rotas within the store, local stock and local reporting. Scoped to their own store only.
4	Kitchen / Production Staff	The live kitchen screen: incoming orders, preparation timers, item-level completion, and marking orders ready. No access to pricing, customer data or financials.
5	Inventory & Stock Controller	Ingredients and stock items, suppliers, purchase records, goods-in, stock counts, wastage recording, reorder thresholds and stock valuation reporting.
6	Menu & Catalogue Manager	Menu structure, categories, items, descriptions, images, modifiers, options, allergen and dietary information, item-level availability and scheduling.
7	Pricing Manager	Prices, price bands, delivery fees, minimum order values, service charges and tax rates. Separated from the catalogue role so that content editing and commercial pricing can be delegated independently.
8	Dispatch Coordinator	The live dispatch board: ready orders, rider availability, assignment and reassignment, delivery exception handling and route oversight.
9	Delivery Rider	Their own assigned deliveries only: run list, navigation, pickup confirmation, delivery confirmation with proof of delivery, and shift status.
10	Finance / Accounts	Payments, settlements, refunds, chargeback records, reconciliation reports, payout tracking and financial exports.
11	Customer Support Agent	Customer accounts, order lookup, order status amendments, issuing refunds within a defined limit, and a full communication history per order. Sensitive financial and configuration areas are hidden.

Role matrix — continued

#	Role	What this role can do
12	Marketing / Promotions Manager	Promotion codes, discounts, campaign scheduling, banners, featured items, and campaign performance reporting.
13	Analyst (read-only)	Read-only access to all reporting and analytics with no ability to change any record. Intended for accountants, consultants and investors.
—	Customer	The public-facing account: ordering, order history, saved addresses, saved cards, live tracking, reordering, and marketing preferences.

6.2 How permissions actually work

- ▶ **Permissions are granular, not role-shaped.** Each role is a named bundle of individual permissions. The Super Admin can add or remove a single permission from a role without any development work.
- ▶ **Custom roles.** New roles can be created from the existing permission set at any time — for example a "Weekend Duty Manager" with a subset of Store Manager rights.
- ▶ **Store scoping.** Roles can be restricted to a specific store, so a manager of one location cannot see another location's data.
- ▶ **Least privilege by default.** A newly created user starts with no access and is granted what they need, rather than starting with everything and having access removed.
- ▶ **Full audit trail.** Every login, permission change, price change, refund, stock adjustment and order override is recorded with the user, the timestamp and the before/after value. The audit log cannot be edited by anyone, including the Super Admin.
- ▶ **Secure authentication** with enforced password policy, session expiry, account lockout after repeated failed attempts, and secure password reset by email.

7 Feature & Requirements Specification

This is the definitive list of what will be built. It is written without technical vocabulary so that it can be reviewed and signed off by anyone in your business.

Every numbered requirement below is included in the fixed price. Anything not listed here, and not listed in Section 13, should be raised now — Section 16 tells you how.

Reading the requirement IDs. Each requirement carries a unique reference (for example **FR-07-04**). Please use these references in your feedback, in acceptance testing and in any future change request, so that both sides are always talking about the same line item.

MODULE 01 Customer Storefront & Ordering Experience

Ref	Feature	What it means for the business
FR-01-01	Branded home and landing experience	A premium, fast-loading storefront carrying your brand, built to convert visitors into orders.
FR-01-02	Menu browsing by category	Clear navigation through categories, sections and featured items with images and descriptions.
FR-01-03	Product detail view	Full item description, image, price, portion/size options, dietary tags and allergen information.
FR-01-04	Item options, extras and modifiers	Sizes, bases, toppings, add-ons and combinations, with prices that update live as choices are made.
FR-01-05	Search and filtering	Search by dish name and filter by category, dietary preference (e.g. vegetarian, vegan) and price.
FR-01-06	Persistent shopping basket	The basket survives page changes, browser refresh and returning later on the same device.
FR-01-07	Live availability	Items that are out of stock are automatically shown as unavailable and cannot be ordered.
FR-01-08	Order type selection	Delivery or collection, chosen up front and reflected throughout pricing and fulfilment.
FR-01-09	Delivery slot selection	ASAP or a scheduled slot, limited by your opening hours and kitchen capacity settings.
FR-01-10	Guest checkout	Customers can order without creating an account, and are offered an account after payment.
FR-01-11	Itemised checkout summary	Subtotal, delivery fee, discounts, service charge and total shown transparently before payment.
FR-01-12	Minimum order enforcement	Configurable minimum basket value per delivery zone, enforced at checkout.
FR-01-13	Order notes and special instructions	Free-text notes per item and per order, surfaced to the kitchen and to the rider.

Ref	Feature	What it means for the business
FR-01-14	Fully responsive design	Identical functionality on mobile, tablet and desktop, with mobile treated as the primary device.
FR-01-15	Store open/closed handling	The storefront respects trading hours, holiday closures and a manual "pause orders" switch.

MODULE 02 Delivery Zone & 7-Mile Radius Management

Ref	Feature	What it means for the business
FR-02-01	Configurable delivery radius	Set to 7 miles from the store at launch, and changeable by the Super Admin at any time without development work.
FR-02-02	Address validation and geocoding	Customer addresses are validated and converted to a precise location using Google Maps, so postcode errors are caught before an order is taken.
FR-02-03	Automatic in/out-of-area decision	The system decides instantly whether an address is deliverable and tells the customer clearly.
FR-02-04	Out-of-area handling	Customers outside the radius are offered collection and, optionally, invited to register interest for future expansion.
FR-02-05	Distance-banded delivery fees	Different delivery charges for different distance bands (e.g. 0–2, 2–4, 4–7 miles), each configurable.
FR-02-06	Distance-banded minimum orders	Higher minimum basket values for longer distances, protecting margin on the outer edge of the zone.
FR-02-07	Address autocomplete	Customers select their address from suggestions rather than typing it, reducing failed deliveries.
FR-02-08	Saved address re-validation	Saved addresses are re-checked against the current radius each time, so a change to the zone applies immediately.
FR-02-09	Zone map in the admin console	A visual map of your service area so managers can see exactly what is covered.
FR-02-10	Multi-store readiness	The zone engine is built so that additional stores, each with their own radius, can be added later.

MODULE 03 Real-Time Order Tracking & Live Delivery

Ref	Feature	What it means for the business
FR-03-01	Defined order lifecycle	Placed → Confirmed → Accepted → Preparing → Ready → Out for delivery → Delivered, plus Cancelled and Refunded.
FR-03-02	Live customer tracking page	A tracking page that updates by itself, with no page refresh, showing the current stage and estimated arrival.
FR-03-03	Live rider location on a map	The customer sees the rider's position on a map once the order is out for delivery.
FR-03-04	Estimated time of arrival	A calculated ETA based on preparation time and live travel distance, updated as the delivery progresses.
FR-03-05	Real-time updates for staff	Every dashboard — kitchen, dispatch, manager, admin — updates live as order states change.
FR-03-06	Proof of delivery	The rider confirms delivery, with an optional photo and/or recipient name captured against the order.
FR-03-07	Delivery exception handling	Structured handling of "customer not present", "address not found" and failed deliveries, with escalation to dispatch.
FR-03-08	Order timeline	A complete, timestamped history of every state change on every order, visible to authorised staff.
FR-03-09	Live order board	A single screen showing every active order in the business and its current stage.
FR-03-10	Delivery performance capture	Actual preparation time, pickup time and delivery time recorded per order to feed reporting.

MODULE 04 In-House Rider Workspace

Ref	Feature	What it means for the business
FR-04-01	Mobile-optimised rider interface	A web interface designed for a phone in one hand, used through the browser — no app installation.
FR-04-02	Shift status	Riders mark themselves available, on a delivery, on break or off shift.
FR-04-03	Assigned run list	The rider sees only their own assigned deliveries, in order, with addresses and customer notes.
FR-04-04	Navigation hand-off	One tap opens turn-by-turn directions to the delivery address in the phone's maps application.
FR-04-05	Pickup confirmation	The rider confirms collection from the store, which moves the order to "Out for delivery" and starts customer tracking.
FR-04-06	Delivery confirmation	The rider completes the delivery with proof of delivery, closing the order.

Ref	Feature	What it means for the business
FR-04-07	Location sharing while on delivery	The rider's device shares location only while a delivery is active, feeding the customer's live map.
FR-04-08	Multi-drop support	A rider can carry more than one order at a time, in a defined sequence.
FR-04-09	Rider performance record	Deliveries completed, average delivery time and on-time rate recorded per rider for management reporting.

MODULE 05 Kitchen Display & Order Operations

Ref	Feature	What it means for the business
FR-05-01	Live kitchen display screen	New orders appear instantly on a screen designed to be read across a busy kitchen.
FR-05-02	Preparation timers	A visible countdown per order, with colour-coded escalation as an order approaches or exceeds its target time.
FR-05-03	Item-level completion	Staff tick off individual items as they are prepared, so long orders can be tracked accurately.
FR-05-04	Allergen and special-instruction flags	Allergen warnings and customer notes are displayed prominently and cannot be missed.
FR-05-05	Order acceptance and rejection	Managers accept orders or reject them with a recorded reason, triggering automatic customer notification and refund where applicable.
FR-05-06	Preparation time control	Configurable default preparation times, and a manual "we are busy" adjustment that extends quoted times across the board.
FR-05-07	Mark ready for dispatch	A single action moves a completed order to the dispatch board.
FR-05-08	Order priority and sequencing	Scheduled orders surface at the right time rather than all at once.
FR-05-09	Kitchen ticket printing (browser)	Orders can be printed to a standard printer from the browser where a paper ticket is preferred.

MODULE 06 Menu, Catalogue & Pricing Management

Ref	Feature	What it means for the business
FR-06-01	Category and menu structure	Create, rename, reorder and hide categories and sub-categories without any technical help.
FR-06-02	Menu item management	Add, edit, duplicate, archive and reorder dishes, with images, descriptions and tags.
FR-06-03	Variants and sizes	Multiple sizes or portions per item, each with its own price and its own stock impact.
FR-06-04	Modifier groups	Reusable option groups (e.g. "Choose a sauce", "Add extras") with minimum and maximum selection rules.
FR-06-05	Combos and meal deals	Bundle items into a single priced offering.
FR-06-06	Allergen and dietary information	Structured allergen data per item, supporting UK allergen-labelling obligations.
FR-06-07	Nutritional information fields	Optional calorie and nutritional fields per item where you choose to publish them.
FR-06-08	Price management	Base prices, modifier prices, and the ability to change any price with immediate effect.
FR-06-09	Scheduled availability	Items or whole categories available only at defined times (e.g. a lunch menu, a weekend special).
FR-06-10	Manual availability override	Take any item off sale instantly with one click, independently of stock.
FR-06-11	Delivery fee and charge configuration	Delivery fees, minimum orders, service charges and packaging charges, all configurable.
FR-06-12	VAT / tax configuration	Configurable tax rates and per-item tax treatment appropriate to UK food retail.
FR-06-13	Image upload and management	Upload, crop and replace dish images through the admin console.
FR-06-14	Price change history	Every price change recorded with who changed it, when, and the previous value.

MODULE 07 Inventory & Stock Management

Ref	Feature	What it means for the business
FR-07-01	Ingredient and stock item register	A full list of everything you hold, with units of measure, cost price and supplier.
FR-07-02	Recipe / bill of materials	Define what each menu item consumes, so selling a dish automatically depletes the right ingredients.
FR-07-03	Automatic stock deduction	Stock reduces in real time as orders are accepted — no manual data entry.
FR-07-04	Live stock levels	Current quantity on hand for every item, visible at any moment.
FR-07-05	Low-stock thresholds and alerts	Set a reorder level per item; the responsible role is alerted by email and on-screen when it is breached.
FR-07-06	Automatic item suspension	When a required ingredient reaches zero, every menu item depending on it is taken off sale automatically.
FR-07-07	Goods receiving	Record deliveries from suppliers into stock, with quantity, cost and date.
FR-07-08	Supplier records	Supplier contact details, items supplied and purchase history.
FR-07-09	Purchase order recording	Raise and record purchase orders against suppliers and reconcile them on receipt.
FR-07-10	Stock counts	Perform a physical count, enter actual quantities, and see the variance against system stock.
FR-07-11	Wastage and spoilage recording	Log waste with a reason code, so waste becomes a measurable, reportable cost.
FR-07-12	Stock adjustment with audit	Any manual correction requires a reason and is permanently recorded against the user who made it.
FR-07-13	Stock valuation	Current value of stock on hand, by item and in total.
FR-07-14	Stock movement history	A complete record of every increase and decrease, and what caused it.
FR-07-15	Cost of goods and margin	Ingredient cost per dish, and therefore gross margin per dish, calculated automatically.
FR-07-16	Expiry and batch date tracking	Optional expiry dates on perishable stock, with alerts as items approach their date.

MODULE 08 Payments, Refunds & Reconciliation — Stripe

Ref	Feature	What it means for the business
FR-08-01	Stripe card payments in GBP	Secure card payment at checkout, configured for the UK market.
FR-08-02	Strong Customer Authentication	The bank verification step required in the UK and EU is handled automatically, so payments are not declined for compliance reasons.
FR-08-03	Digital wallets	Apple Pay and Google Pay accepted through Stripe, which materially improves mobile conversion.
FR-08-04	Saved payment methods	Returning customers can securely re-use a saved card. Card data is stored by Stripe, never by your system.
FR-08-05	Guaranteed payment confirmation	Payment confirmation is received directly from Stripe rather than from the customer's browser, so an order is never marked paid in error.
FR-08-06	Automatic order–payment matching	Every payment is reconciled to its order automatically, with the Stripe reference recorded.
FR-08-07	Full and partial refunds	Refunds issued directly from the order screen, with a reason recorded and the customer notified by email.
FR-08-08	Refund authority limits	Configurable refund limits per role, so support staff can resolve small issues without exposing the business.
FR-08-09	Failed payment handling	Clear customer messaging and safe retry on a declined card, with no duplicate orders created.
FR-08-10	Payment status visibility	Paid, pending, failed, refunded and partially refunded states shown clearly on every order.
FR-08-11	Settlement and payout reporting	Reporting on gross takings, Stripe fees, refunds and net payouts for a chosen period.
FR-08-12	Cash on delivery (optional)	Can be enabled or disabled per store, with rider cash confirmation and reconciliation.
FR-08-13	Financial export	Export orders, payments and refunds to spreadsheet format for your accountant.

Ref	Feature	What it means for the business
-----	---------	--------------------------------

MODULE 09 Notifications & Email Communications

Ref	Feature	What it means for the business
FR-09-01	Branded transactional emails	Every automated email carries your branding, not a generic template.
FR-09-02	Order confirmation email	Sent within seconds of payment, with a full itemised receipt and a tracking link.
FR-09-03	Order status emails	Automatic emails at accepted, preparing, out for delivery and delivered.
FR-09-04	Cancellation and refund emails	Clear notification with the reason and the refund amount and timing.
FR-09-05	Account emails	Welcome, email verification, password reset and account change confirmations.
FR-09-06	Internal staff alerts	Email alerts to the right role for new orders, low stock, failed payments and delivery exceptions.
FR-09-07	Daily summary email	An optional end-of-day trading summary to management.
FR-09-08	In-app notification centre	On-screen notifications for staff, with a read/unread state.
FR-09-09	Marketing consent capture	Explicit, recorded opt-in for marketing email, held separately from transactional email, as UK data protection requires.
FR-09-10	Notification preferences	Customers manage which non-essential emails they receive, with a working unsubscribe link.

MODULE 10 Sales, Analytics & Business Intelligence

Ref	Feature	What it means for the business
FR-10-01	Executive dashboard	Today's revenue, orders, average order value and live order count on one screen.
FR-10-02	Revenue reporting	Revenue by day, week, month and custom date range, with period-on-period comparison.
FR-10-03	Order analytics	Order volume, order value distribution, delivery versus collection split, and cancellation rate.
FR-10-04	Peak-time analysis	Orders by hour and by day of week, so you can staff and prep to actual demand.

Ref	Feature	What it means for the business
FR-10-05	Product performance	Best and worst selling items by volume and by revenue, with margin per item.
FR-10-06	Category performance	Which parts of the menu carry the business and which do not.
FR-10-07	Customer analytics	New versus returning customers, order frequency, and top customers by value.
FR-10-08	Delivery performance	Average preparation time, average delivery time, on-time delivery rate and failed delivery rate.
FR-10-09	Rider performance	Deliveries per rider, average delivery time and on-time rate.
FR-10-10	Stock and waste reporting	Consumption, wastage by reason, stock value and variance from stock counts.
FR-10-11	Payment and refund reporting	Takings, fees, refunds and net position for any period.
FR-10-12	Promotion performance	Redemptions, revenue and discount cost per campaign.
FR-10-13	Date-range and store filtering	Every report filterable by period and, where relevant, by store.
FR-10-14	Export to spreadsheet	Any report exportable to CSV/Excel for your own analysis or your accountant.
FR-10-15	Visual charts	Clear, readable charts on every report — not just tables of numbers.

MODULE 11 Customer Accounts & Relationship Management

Ref	Feature	What it means for the business
FR-11-01	Customer registration	Self-service account creation with email verification.
FR-11-02	Secure sign-in and password reset	Standard, secure authentication with email-based password recovery.
FR-11-03	Customer profile	Name, contact details and communication preferences, editable by the customer.
FR-11-04	Multiple saved addresses	Home, work and other addresses, each validated against the delivery radius.
FR-11-05	Order history	A complete list of past orders with full detail and receipts.
FR-11-06	One-tap reorder	Re-place any previous order in a single action — one of the strongest drivers of repeat business.
FR-11-07	Saved cards	Securely stored by Stripe for faster repeat checkout.
FR-11-08	Favourites	Customers save preferred dishes for quick access.

Ref	Feature	What it means for the business
FR-11-09	Ratings and feedback	Post-delivery rating and comment, visible to management.
FR-11-10	Admin customer view	Staff can see a customer's full history, addresses and orders when handling a support call.
FR-11-11	Customer segmentation	Filter customers by spend, frequency and recency to support targeted marketing.
FR-11-12	Data rights self-service	Customers can export or request deletion of their data, supporting UK GDPR obligations.

MODULE 12 Promotions & Discounts

Ref	Feature	What it means for the business
FR-12-01	Promotion codes	Percentage or fixed-amount discount codes, created and managed by the marketing role.
FR-12-02	Usage rules	Minimum spend, first-order-only, one-use-per-customer, total redemption cap and expiry date.
FR-12-03	Free delivery promotions	Waive the delivery fee under defined conditions.
FR-12-04	Scheduled campaigns	Promotions that start and end automatically at set dates and times.
FR-12-05	Item and category targeting	Restrict a promotion to specific dishes or categories.
FR-12-06	Featured and promoted items	Highlight chosen dishes on the storefront.
FR-12-07	Homepage banners	Managed promotional banners on the customer site.
FR-12-08	Migration incentives	First-order discount codes designed specifically to move marketplace customers onto your own platform.
FR-12-09	Campaign reporting	Redemptions, revenue generated and discount cost per campaign.

MODULE 13 Role-Based Administration & Super Admin Console

Ref	Feature	What it means for the business
FR-13-01	Super Admin console	A single console with authority over every setting, user, permission and record in the platform.
FR-13-02	User management	Create, edit, suspend and remove staff accounts, and reset their access.
FR-13-03	Role management	The thirteen supplied roles, plus the ability to create new custom roles from the permission set.
FR-13-04	Granular permission control	Grant or revoke individual permissions on any role without development work.
FR-13-05	Store scoping	Restrict a user to one store's data, ready for multi-site operation.
FR-13-06	System configuration	Delivery radius, fees, tax rates, opening hours, preparation times, order limits and notification rules, all editable in the console.
FR-13-07	Payment configuration	Stripe settings, refund limits and payment method availability, controlled centrally.
FR-13-08	Full audit log	Every significant action recorded with user, timestamp and before/after values — and not editable by anyone.
FR-13-09	Order override authority	Ability to amend, cancel, refund or reassign any order, with the reason recorded.
FR-13-10	Content management	Static pages such as About, Contact, Terms, Privacy Policy and FAQs, editable without a developer.
FR-13-11	Emergency controls	A "pause all ordering" switch and a maintenance mode for use during an incident.
FR-13-12	Session and access oversight	See who is logged in and force a sign-out where necessary.
FR-13-13	Data export	Export orders, customers, stock and financial data at any time — your data remains yours.

Ref	Feature	What it means for the business
-----	---------	--------------------------------

MODULE 14 Security, Compliance & Data Protection

Ref	Feature	What it means for the business
FR-14-01	Encrypted connections throughout	All traffic secured by HTTPS with a valid certificate.
FR-14-02	Card data never held by you	Card details are captured and stored by Stripe. Your platform never sees or stores a card number, which keeps your PCI obligations at the lowest tier.
FR-14-03	Secure password handling	Passwords are stored using industry-standard irreversible hashing and are never recoverable in plain text.
FR-14-04	Protection against common attacks	Defences against the standard web attack classes, plus rate limiting on sign-in and checkout.
FR-14-05	UK GDPR alignment	Lawful basis for processing, explicit marketing consent, data export and deletion on request, and a documented retention position.
FR-14-06	Privacy policy and cookie notice	Published policies and a compliant cookie consent banner on the customer site.
FR-14-07	Allergen information support	Structured allergen data per item, supporting the information duties that apply to UK food businesses.
FR-14-08	Role-based data minimisation	Staff see only the customer data their role requires — riders, for example, do not see payment information.
FR-14-09	Automated database backups	Scheduled backups with a documented restore procedure, tested before handover.
FR-14-10	Audit trail for accountability	A permanent record of who did what and when, for dispute resolution and internal control.

An important legal boundary. We build the platform to support your compliance obligations — consent capture, data export, deletion, allergen fields, audit trails and secure payment handling. We are not a law firm and we do not provide legal advice. **Final responsibility for UK GDPR registration, your privacy policy wording, food hygiene compliance and the accuracy of your published allergen data rests with you.** We strongly recommend your own legal or compliance review before go-live, and we will support that review at no additional cost.

MODULE 15 Design, Interface & Experience Standards

Ref	Feature	What it means for the business
FR-15-01	Bespoke visual design	A custom-designed interface built around your brand — not a purchased template with your logo dropped in.
FR-15-02	Design system	A consistent set of colours, type, spacing and components used across every screen, so the platform feels like one product.
FR-15-03	Motion and micro-interaction	Considered animation and transitions that make the interface feel responsive and premium, applied deliberately rather than decoratively.
FR-15-04	Mobile-first	Designed for the phone first, because that is where the overwhelming majority of food orders are placed.
FR-15-05	Speed as a feature	Fast page loads and optimised images. Slow checkouts lose orders, so performance is treated as a requirement, not a nicety.
FR-15-06	Accessibility	Readable contrast, keyboard navigation, sensible focus order and screen-reader labelling, targeting WCAG 2.1 AA as a working standard.
FR-15-07	Cross-browser support	Verified on current versions of Chrome, Safari, Firefox and Edge, on desktop and mobile.
FR-15-08	Operational screens designed for use	Kitchen, dispatch and rider screens designed for speed and legibility under pressure, not for looking good in a screenshot.
FR-15-09	Clear empty and error states	Every screen behaves sensibly when there is no data, and every error tells the user what to do next.
FR-15-10	Search-engine fundamentals	Clean page structure, metadata and sitemap so your own site can be found — the foundation for reducing marketplace dependence.

8 Technology Foundation

This section is included for completeness and for any technical adviser you may consult. It is not required reading for the commercial decision.

Layer	Technology	Why it was chosen
Customer & admin web	Next.js with React	Fast page loads, excellent mobile performance and strong search-engine behaviour — the three things that decide whether a food-ordering site converts.
Interface motion	Framer Motion	Smooth, controlled animation and transitions that give the platform a premium feel without harming performance.
Application server	Django (Python)	A mature, secure framework with proven strength in permission systems, administrative interfaces and business-rule-heavy applications.
Database	PostgreSQL	Reliable, transactional and well suited to inventory and financial data where correctness cannot be traded for speed.
Payments	Stripe	The UK standard for card payments, with built-in Strong Customer Authentication and no card data held on your systems.
Location services	Google Maps Platform	Address validation, geocoding, distance calculation and mapping — the engine behind the 7-mile radius and live tracking.
Real-time updates	WebSocket-based live channels	The mechanism that lets order boards, kitchen screens and customer tracking update by themselves.
Email	Transactional email service	Reliable, monitored delivery of receipts and status notifications.
Hosting	Managed cloud platform	Deployed on managed cloud infrastructure with automated backups and monitoring.

Why this matters commercially. This is the stack both engineers on this project use daily and have shipped in production repeatedly. No part of this engagement involves learning a new technology at your expense. That is the principal reason a 45-day delivery window is a commitment rather than an aspiration.

9 Project Plan & Delivery Timeline

Total duration: 45 calendar days, commencing on the **Project Start Date** — defined as the first working day after written confirmation of this proposal *and* receipt of the initial payment, whichever is later.

9.1 Phased delivery schedule

Days	Phase	What is delivered	Your input
1–5	Phase 0 Discovery & Design	Requirements workshop, confirmed scope baseline, brand and design direction, screen designs for the key customer and admin journeys, and the delivery-zone configuration.	Required Design sign-off
6–13	Phase 1 Foundation & Access Control	Core data structure, secure authentication, all thirteen roles, the granular permission system, the Super Admin console shell and the audit log.	Review
14–21	Phase 2 Catalogue & Inventory	Full menu and catalogue management, modifiers and variants, pricing and tax configuration, and the complete inventory, recipe, stock-movement and supplier module.	Required Menu & stock data
22–30	Phase 3 Ordering, Payments & Zone Engine	The customer storefront, basket and checkout, the 7-mile delivery-radius engine, Stripe payments end to end, refunds, and customer accounts.	Required Mid-project demo sign-off
31–37	Phase 4 Real-Time Operations	Live order tracking, the kitchen display, the dispatch board, the rider workspace, live location on the map, proof of delivery, and the full email notification suite.	Review
38–41	Phase 5 Analytics & Hardening	All reporting and analytics dashboards, promotions, exports, security hardening, performance tuning and full cross-browser and cross-device testing.	Review
42–45	Phase 6 UAT, Launch & Handover	Your acceptance testing, defect resolution, production deployment, live-data configuration, staff training sessions, documentation handover and go-live.	Required UAT & final sign-off

9.2 Governance during delivery

- ▶ **Weekly written progress report**, every Friday, covering what was completed, what is next, and anything that is blocked.
- ▶ **Three formal demonstrations** — at the end of Phase 0 (designs), Phase 3 (ordering and payments working end to end) and Phase 6 (final acceptance).
- ▶ **A shared environment** available from Phase 2 onward, so you can see and use the platform as it is built rather than only at the end.

- ▶ **A single named point of contact** for the engagement, so you are never routed between people.

The timeline depends on you as well as on us. Four checkpoints in the table above are marked **Required**. If a required sign-off, or the menu and stock data, is delayed, the delivery date moves by the length of that delay. We will flag any such delay in writing on the day it occurs rather than absorbing it silently and reporting a missed date at the end. Please nominate one decision-maker with authority to sign off — review by committee is the single most common cause of a slipped delivery date.

10 Quality Assurance, Testing & Acceptance

10.1 How quality is assured

Activity	What we do
Automated testing	Automated tests covering the business-critical paths: pricing calculation, stock deduction, delivery-radius decisions, payment handling and permission enforcement.
Functional testing	Every requirement in Section 7 tested against its stated behaviour before it is presented to you.
Cross-device testing	Verified on iPhone and Android phones, tablet and desktop, at the screen sizes your customers actually use.
Cross-browser testing	Verified on current Chrome, Safari, Firefox and Edge.
Payment testing	Full Stripe test-mode coverage: successful payments, declines, authentication challenges, partial and full refunds, and duplicate-submission protection.
Permission testing	Each of the thirteen roles tested to confirm it can reach what it should and cannot reach what it should not.
Load sanity testing	The platform is exercised at a realistic multiple of your expected peak concurrent order volume.
Security review	Review against the standard web application risk categories, plus rate limiting and secure configuration checks before go-live.
Backup and restore	A backup is taken and restored successfully before handover — an untested backup is not a backup.

10.2 Acceptance process

1. At Phase 6 we provide a **User Acceptance Testing pack** listing every requirement from Section 7 with the steps to verify it.
2. You test the platform against that pack over the UAT window and record any defect against its requirement reference.
3. **Any defect — that is, any behaviour that does not match this document — is fixed at no charge**, both during UAT and throughout the 60-day support period.
4. A request for behaviour that this document does not describe is a **change request**, handled under Section 16.
5. Written acceptance, or 7 calendar days of live commercial use without a raised defect, constitutes acceptance.

10.3 What you receive at handover

- ▶ The complete, working platform deployed and live on your own domain.
- ▶ **Full ownership of the source code**, transferred to you on final payment.
- ▶ Administrator and staff user guides written in plain language.
- ▶ Recorded training sessions for each major role.
- ▶ Deployment, configuration and backup/restore documentation.
- ▶ All accounts and credentials — hosting, Stripe, Google Maps, domain, email — held in your name, not ours.

No lock-in. Every account is registered in your name and the code is yours. If you choose to move to another development team after this engagement, you can, and nothing in this platform is designed to make that difficult. We would rather earn the next piece of work than trap it.

11 What We Need From You

The 45-day timeline assumes the following are provided promptly. Each item is listed with when it is needed.

What	Detail	Needed by
A single decision-maker	One named person with authority to approve designs, scope and acceptance.	Day 1
Brand assets	Logo files, brand colours, fonts and any existing brand guidelines. If none exist, we will propose a direction.	Day 3
Menu data	Full menu: categories, dish names, descriptions, prices, sizes, options and allergen information, in a spreadsheet.	Day 12
Food photography	Images for menu items. If you do not have them, we will advise on the most cost-effective route — photography is not included in this quotation.	Day 14
Stock data	Ingredient list with units, cost prices, suppliers and, ideally, recipes for the main dishes.	Day 16
Operational parameters	Trading hours, preparation times, delivery fee bands, minimum order values and the store's exact address.	Day 10
Stripe account	A UK Stripe account in your business name, fully verified. Verification can take several days — please start early.	Day 18
Google Cloud account	For the Maps Platform API, with billing enabled in your name. We will guide the setup.	Day 18
Domain access	The domain you will trade on, with the ability to change DNS records.	Day 35
Legal documents	Your terms and conditions, privacy policy and refund policy. We provide the structure; the wording must be yours or your solicitor's.	Day 38
UAT participation	Named staff available to test the platform during Days 42–45.	Day 42
Staff availability for training	Two hours per role group for training sessions.	Day 44

The two items most likely to delay you. In our experience the two things that most often hold up a launch of this kind are (1) **Stripe account verification**, which is outside anyone's control and can take a week or more, and (2) **menu and food photography**. Please start both in week one, not week five.

12 Commercials & Payment Terms

12.1 Investment

Total fixed project fee

INR 94,999

≈£888 indicative

All-inclusive. No hourly billing. No hidden extras.

The GBP figure is indicative only, converted at INR 107 = £1. The contracted amount is the Indian Rupee figure. If you would prefer to contract and settle in GBP at a fixed rate, please tell us before sign-off and we will re-issue the commercial section accordingly.

12.2 What the fee includes

Included in the fixed fee	
✓	Complete discovery, requirements definition and scope baselining
✓	Bespoke UI/UX design for every customer, staff and administrative screen
✓	Full development of all fifteen modules and every requirement in Section 7
✓	All thirteen roles with granular, configurable permissions
✓	Stripe payment integration, tested end to end including refunds
✓	Google Maps integration for the 7-mile delivery radius and live tracking
✓	Real-time order tracking and live operational dashboards
✓	The complete inventory, stock, recipe and supplier module
✓	All reporting, analytics and data exports
✓	Full testing — functional, cross-browser, cross-device, payment and security
✓	Production deployment and go-live configuration
✓	Staff training and recorded training sessions
✓	Administrator and user documentation
✓	All cloud and infrastructure costs during the 45-day development period
✓	One month of post-launch cloud hosting, complimentary
✓	60 days of pre- and post-launch support
✓	Full transfer of source code ownership on final payment

12.3 Payment schedule

Stage	Trigger	Amount	Share
1	On written confirmation of this proposal (Project Start)	INR 38,000	40%
2	On acceptance of the Phase 3 demonstration (Day 30) — ordering and payments working end to end	INR 28,500	30%
3	On go-live and final acceptance (Day 45)	INR 28,499	30%
Total		INR 94,999	100%

- ▶ Invoices are payable within **7 calendar days** of issue.
- ▶ Source code ownership transfers to you on receipt of the final payment.
- ▶ This payment schedule is our proposal and is open to discussion before sign-off.

12.4 Cloud and infrastructure costs

Period	Who pays	Notes
During development (Days 1–45)	We do	All development, staging and testing infrastructure is at our cost. You are billed nothing.
First month after go-live	We do — complimentary	Provided free as part of this engagement.
From month two onward	You do	Indicatively £50–£150 per month at launch volumes, excluding Stripe transaction fees. Accounts are in your name so you control and can audit the spend.

Third-party charges that are inherently usage-based — Stripe transaction fees, Google Maps API usage above the free allowance, and email volume above free-tier limits — are billed by those providers directly to your accounts at all times, including during development.

13 Out of Scope — Chargeable Items

This section carries the same commercial weight as the feature list. The items below are **not** included in the INR 94,999 fee. They are listed explicitly so that there is no ambiguity later. Several of them are things clients frequently assume are included — please read the list rather than skim it.

Any feature, screen, integration or behaviour not described in Section 7 of this document will be quoted separately as a change request once development has started.

13.1 Explicitly excluded from this engagement

Excluded item		Note
1	Native iOS and Android applications	This is a web platform. It works excellently on mobile browsers, but no App Store or Play Store application is included.
2	Marketplace integrations	No menu synchronisation or order ingestion from Uber Eats, Deliveroo or Just Eat.
3	EPOS / till system integration	No integration with in-store point-of-sale hardware or software.
4	Accounting software integration	No Xero, QuickBooks or Sage integration.
5	SMS and WhatsApp notifications	Email notifications are included; SMS and WhatsApp messaging are not, and would carry their own per-message costs.
6	Loyalty points and referral schemes	Promotion codes and discounts are included; a points-based loyalty programme is not.
7	Table booking and dine-in ordering	The platform covers delivery and collection only.
8	Multi-language and multi-currency	Delivered in English and GBP.
9	AI or machine-learning features	No demand forecasting, dynamic pricing or automated route optimisation. Dispatch assignment is manual with proximity-based suggestions.
10	Rider payroll, scheduling and HR	Rider performance is reported; wage calculation and rota management are not included.
11	Food photography, copywriting and brand identity creation	We design the platform; we do not produce photographs, write your menu descriptions, or create a logo from scratch.
12	Marketing services	No SEO campaigns, paid advertising, social media management or email marketing execution.
13	Third-party courier integration	The platform is built for your in-house fleet.
14	White-label or multi-tenant resale	A single business, ready for additional stores. Not a platform you can resell to other restaurants.
15	Historical data migration	No import of past orders or customer records from an existing system.
16	Ongoing hosting and maintenance beyond the stated periods	After the complimentary month and the 60-day support window, ongoing support is a separate arrangement.
17	Legal, accounting and compliance advice	We build to support compliance; we do not advise on it.
18	Custom hardware	No kitchen printers, tablets, terminals or scanners supplied or integrated beyond standard browser printing.

If you need any of the above, say so now. Several items — SMS notifications and a loyalty scheme in particular — are far cheaper to include in the original build than to add afterwards. Tell us before sign-off and we will re-quote the whole package rather than charge you a premium for it later. Section 16 sets

out how items raised *after* development starts are handled.

14 Assumptions, Dependencies & Risk Register

14.1 Assumptions this proposal is built on

1. A **single store** at launch, with the platform architected so that further stores can be added later as a chargeable extension.
2. Delivery is by **your own riders**. No third-party courier network is involved.
3. Trading is in **GBP**, in **English**, for the **UK market**.
4. The platform is **new**, with no legacy system to integrate with or migrate data from.
5. Menu and stock data will be supplied by you in a structured, usable form.
6. Expected launch volume is within a normal independent-operator range. Requirements materially beyond that would need a separate infrastructure conversation.
7. Design feedback is consolidated into **a maximum of two rounds per phase** by a single decision-maker.
8. Stripe and Google Cloud accounts are opened in your business name and verified by the dates in Section 11.

14.2 Risk register

Risk	Impact	Why it matters	How we mitigate it
Delayed Stripe verification	High	Payments cannot be tested live, blocking Phase 3 acceptance.	Flagged as a Day-18 dependency; we will start the process with you in week one and can build against Stripe test mode meanwhile.
Late or incomplete menu / stock data	High	Phase 2 cannot complete, and every later phase shifts.	Template spreadsheets supplied on Day 1; weekly written escalation if data is outstanding.
Scope expansion during build	High	The single most common cause of missed delivery dates in projects of this type.	An explicit requirement list (Section 7), an explicit exclusion list (Section 13) and a formal change procedure (Section 16).
Review by committee	Medium	Conflicting feedback from multiple stakeholders stalls sign-off.	A single named decision-maker is a stated condition of the timeline.
Missing food photography	Medium	A menu without images converts materially worse.	Raised at Day 14; we will advise on low-cost options, but production is not in scope.
Google Maps API cost at high volume	Low	Usage-based charges scale with order volume.	Address lookups are cached and geocoding calls minimised by design; usage is visible in your own Google account.

Risk	Impact	Why it matters	How we mitigate it
Underestimating customer migration effort	Medium	The ROI in Section 4 depends on customers actually moving to your platform.	Migration tooling is built in (FR-12-08), and we will provide a practical migration checklist at handover — but execution is yours.
Support window versus UK trading hours	Medium	The standard support window does not overlap London evening service.	Addressed explicitly in Section 15.3. Please read that section and confirm you are comfortable with it.

15 Support & Service Levels

15.1 Support period

60 days of pre-launch and post-launch support is included in the fixed fee. This period covers the run-up to go-live and the critical first weeks of live trading.

What is covered	Detail
Defect resolution	Any behaviour that does not match this document is fixed at no charge, for the full 60 days.
Configuration assistance	Help with delivery zones, fees, menus, pricing, roles and system settings.
Deployment support	Assistance with go-live, DNS, domain and account configuration.
Additional training	Follow-up sessions for new or existing staff during the period.
Operational guidance	Practical help interpreting reports and using the platform to run the business.
Monitoring	We watch for errors and performance issues during the period and act on them proactively.

15.2 Support channels and response targets

Priority	Definition	Response	Target resolution
P1 — Critical	The platform is down, or customers cannot place orders or pay.	Within 2 working hours	Same working day
P2 — High	A major function is broken but a workaround exists.	Within 4 working hours	1–2 working days
P3 — Medium	A minor defect or an inconvenience.	Within 1 working day	3–5 working days
P4 — Low	A question, a cosmetic issue or a configuration request.	Within 2 working days	By agreement

Channels: telephone and chat, on the numbers listed in Section 18, plus email for anything that needs a written record.

15.3 Support hours — please read carefully

Standard support hours: Monday to Friday, 10:00–18:00 IST.

Our team is based in India. Converted to United Kingdom local time, the standard support window is:

British Summer Time (BST) 05:30 – 13:30 UK time

Greenwich Mean Time (GMT) 04:30 – 12:30 UK time

We are drawing your attention to this deliberately. This window covers your morning and early afternoon, but it does *not* cover the London evening dinner service, which is when a food delivery business is busiest and when an incident would be most damaging.

Accordingly, for the duration of the 60-day support period we additionally commit to **best-effort P1 (critical) response outside the standard window, covering UK trading hours up to 22:00 UK time, seven days a week.** P2, P3 and P4 items are handled within the standard window only.

If you require **guaranteed** (rather than best-effort) evening and weekend cover, tell us before sign-off and we will quote an extended support arrangement. We would rather price that properly than promise it informally and let you down during a Friday night service.

15.4 After the 60-day period

Continued support is available under a separate, optional arrangement. There is no obligation to take it — you own the code and the accounts, and you are free to maintain the platform yourself or with any other team. If you would like an ongoing support and maintenance quotation, we are happy to provide one closer to the end of the included period, once we both know what the platform's real operating profile looks like.

16 Change Control Procedure

Stated plainly, as agreed: *any new feature beyond what is described in this document will be chargeable once development has started.*

This is not a mechanism for adding cost — it is the mechanism that protects your delivery date and your fixed price. Uncontrolled additions are the reason fixed-price software projects overrun, and the client always pays for that overrun one way or another. A clear procedure is the fairer arrangement for both sides.

16.1 Before development starts — free of charge

Until the Project Start Date, **scope changes cost you nothing**. Read Section 7 and Section 13 now, discuss them internally, and come back with anything missing. We will revise this document and re-quote the whole package at no charge, as many times as needed. This is the moment to be demanding.

16.2 After development starts

1. You raise the request in writing, referencing the relevant module or requirement.
2. Within **2 working days** we respond with a written impact assessment covering the additional effort, the cost, the effect on the delivery date, and any knock-on effect on already-completed work.
3. You approve or decline in writing. **No work begins and no charge arises without your written approval.**
4. Approved changes are added to the plan, and the revised delivery date — if any — is confirmed in writing.

16.3 What is never charged as a change

To be unambiguous, the following are always fixed at no cost:

- ▶ **Any defect** — anything that does not behave as this document describes.
- ▶ **Clarification** of a requirement that is genuinely ambiguous in this document. Where the wording is unclear, the interpretation more favourable to you applies.
- ▶ **Content and configuration changes** — menu items, prices, delivery fees, opening hours, staff accounts, promotions. These are all things you control yourself through the admin console, by design.
- ▶ **Design refinement within the agreed two rounds per phase.**

16.4 Indicative rate for additional work

Change requests are quoted per item against the effort involved. Where you would prefer a time-based arrangement, an indicative rate can be agreed in writing at sign-off. Small changes raised during the 60-day support period that take under an hour are absorbed at our discretion and at no charge — we do not intend to invoice you for fifteen minutes of work.

17 Acceptance & Sign-Off

17.1 Summary of the offer

Item	Commitment
Scope	The fifteen modules and every numbered requirement in Section 7
Roles	Thirteen operational roles with granular permissions, under full Super Admin control
Delivery radius	7 miles, configurable, enforced automatically at checkout
Payments	Stripe, GBP, UK-configured, including refunds and reconciliation
Timeline	45 calendar days from the Project Start Date
Fixed fee	INR 94,999 — all inclusive
Payment schedule	40% on confirmation, 30% at Day 30, 30% at go-live
Cloud costs	Development costs borne by us; first post-launch month complimentary
Support	60 days pre- and post-launch, Mon–Fri 10:00–18:00 IST, with best-effort critical cover to 22:00 UK time
Code ownership	Transferred to you in full on final payment
Validity	This offer is open for 30 days from the date of issue

Acknowledgement of the change-control term. By signing below you confirm that you have read Section 7 (Feature & Requirements Specification) and Section 13 (Out of Scope), and that you understand that **any feature not described in this document will be chargeable once development has started**, under the procedure set out in Section 16.

17.2 To proceed

1. Review Sections 7 and 13 and raise anything missing — **at no cost**, before sign-off.
2. Confirm the payment schedule in Section 12.3, or propose an alternative.
3. Confirm you are comfortable with the support window in Section 15.3, or ask us to quote extended cover.
4. Sign below and return this document.
5. Settle the initial invoice. The 45-day clock starts the next working day.

This document constitutes a commercial proposal and statement of work. It is not a contract until signed by both parties. On signature it forms the agreed scope baseline for the engagement, and takes precedence over any prior verbal or written discussion of scope, price or timeline.

18 Your Delivery Team

This is a two-person engagement. You will work directly with the people building the platform — there is no account manager between you and the engineers, and no work is subcontracted.

Mohammed Hyder Ali

Project Lead · Backend & Systems Architecture

Responsible for the Django and PostgreSQL back end, the role and permission system, the inventory and stock engine, Stripe payment integration, the delivery-zone logic and overall system architecture. Primary point of contact for project governance and delivery scheduling.

Telephone & chat: +91 8639264454

Om Verma

Product Engineering · Front-End & Experience Architecture

Responsible for the Next.js and React front end across the customer storefront, admin console, kitchen, dispatch and rider interfaces; the design system and motion design; the real-time tracking experience; and analytics and reporting interfaces. Primary point of contact for design, user experience and front-end delivery.

Telephone & chat: +91 6281704551

Portfolio: omverma-portfolio.netlify.app

18.1 How to reach us during the engagement

Channel	Availability
Telephone	Monday to Friday, 10:00–18:00 IST (05:30–13:30 UK, BST)
Chat	Monday to Friday, 10:00–18:00 IST — typically answered within the hour
Email	Any time. Responded to within one working day
Weekly progress report	Every Friday, in writing, for the duration of the project
Critical incidents (P1)	Best-effort cover to 22:00 UK time, seven days a week, during the 60-day support period

Thank you for the opportunity.

We would rather have a difficult conversation about scope now than a difficult one about a missed date in week six. If anything here is unclear or wrong, please tell us — changes before sign-off cost you nothing.

Mohammed Hyder Ali • Om Verma
